

PRESS RELEASE

FOR IMMEDIATE RELEASE

Novi, MI - Sept. 21, 2009 - PuzzleFlow Solutions USA has recently completed the installation of its ground-breaking WebPairer software solution at 16 CNHI (Community Newspaper Holdings Inc.) locations throughout the USA.

With its ability to analyze, fix, page-pair, and automate all aspects of newspaper pre-press production, the PuzzleFlow WebPairer solution enables CNHI to achieve significant cost and time savings in the performance of day-to-day manual tasks. PuzzleFlow was sold to CNHI by Konica Minolta Graphic Imaging as part of a complete CTP bundle that will allow each newspaper site an unparalleled level of automation.

"PuzzleFlow is proving to be the most powerful, AND flexible of all the workflow software packages we found," said Tom Shafer, CNHI's Corporate Vice President/production. "To find a company that really gets it, in this economy, and provide the full range of support prior-to, during, and after the installation and through implementation is as rewarding as any part of our conversion to CTP."

WebPairer is a world-class PDF page-pairing workflow that delivers all the capability expected of advanced newspaper production. Features such as direct printing, double trucks, creep, fan-out/web growth compensation, color management, and PDF preflight, fixing, and optimization are all included in a user-friendly 100% web interface. WebPairer fully supports quarter, half, and three-quarter web configurations up to 16-up. Multi-section and multi-press run layouts take only seconds to setup.
